

API Laguna Limestone

High quality natural limestone for architectural masonry, cladding and paving

API LAGUNA LIMESTONE

API White Laguna Limestone is quarried in Eastern Spain and is a fine grain Biomicritic limestone providing a competitive option to many of the limestones available in Central and Southern Europe.

API Laguna has a base colour of white and contains small amounts of shells and fossils within the make-up of the stone. Limestone has a harder surface than sandstone meaning that it is more suitable for thin cladding. API Laguna will maintain sufficient strength even at a cladding thickness of 20mm.

API Laguna has only been available to API Stone for two years and has already proved a firm favourite and material of choice for some exclusive residential properties primarily in the Greater London area.

Residential projects of note are as follows:

- Buildings 15 & 16, Woolwich Arsenal, London.
- 38 The Bishops Avenue, London.

API Stone Ltd added Laguna to its portfolio in 2012 due to always being asked to supply a white limestone. Laguna limestone has proven commercial benefits when compared to its Portuguese (Moleanos and Crema Mocha) and UK (Portland) counterparts, and has greater consistency in quality and colour than any other limestone available in Europe.

The material is suitable for all ashlar, cladding, architectural and landscape applications in various finishes from honed to bush hammered.

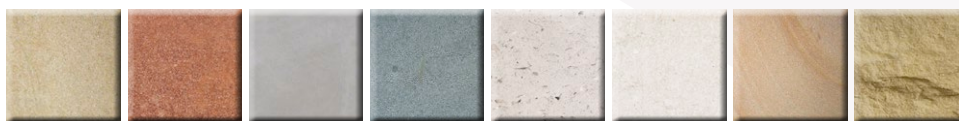

Extensive reserves are readily available and with blocks up to 3500mm long, large pieces are easily cut in one piece.

TECHNICAL DETAILS:

Geographical Type	Biomicrite Limestone
Main Colour	White
Colour Variations	With Shells and fossils
Texture	Fine Grain
Availability	Contract up to 100,000 m2
Average Block Size	2500L x 1500W x 1500H (mm)

ALSO AVAILABLE FROM API STONE:

API Beige API St. Bees API Crema Sanza API Grey API Laguna API Portland API Vein API Walling

CASE STUDY

*38 The Bishops Avenue,
London, N2*

38 The Bishops Avenue is a new 28,000 sqft private residence with eleven bedrooms, indoor pool and leisure facility.

The brief from **Fairhurst Ward Abbotts** (London), **Bertsch Architekten** (Berlin) and Internal designers **Davide Rizzo** was to supply a stone that was clean white in colour for both internal and external use.

API Laguna limestone definitely fits the bill for this project, being pure white, able to take a polish and accept masonry detail.

API Stone Ltd supplied all external stonework, internal flooring, main stairway and main fireplace. API Stone Ltd also supplied all construction design on the full project.
